DETAILED ACTION

1. This office action is in response to the application filed May 3, 2001.

Drawings

2. Figures 5(a & b) and 6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-7 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.
5. Claim 1 is not supported by the specification. The applicant indicates (Page 3, Lines 1-5) that, "the electrode has a through portion passing through between the recess and outer portion of a circumferential wall," while the claim states that the through portion is passing through bet surrounding said recess. Assuming the word **bet** is a minor error and that the word should have been *between*, it is still difficult to determine the through portion and where it is positioned in relation to the electrode

structure. Is the through portion merely a groove or is it a complete hole? What two distinct surfaces is the through portion passing between?

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claim 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

8. Claim 1 recites the limitation "electrode" in line 4. There is insufficient antecedent basis for this limitation in the claim. There is no correlation between the "electrode structure" and the "electrode".

9. With respect to claim 2, is indefinite as to what applicant means by the term "hemispherical configuration" or "hemispheric portion".

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Abe (U. S 6,028,366), Lee (U.S 5,872,399), Ikegami (U.S 6,194,781).

The prior art disclose in Abe the use of a recessed land with a through portion between the recess and an outer portion of a circumferential wall, in Lee the use of through portions in a land, and in Ikegami the use of a recessed land.
